Nau mai, haere mai ki tēnei wāhanga tuaono. Greetings and a very warm welcome to Topic 6: Client-side web application development – CSS. In this topic, we will focus on CSS (Cascading Style Sheets) and its role in client-side web application development.

You will learn how to style web pages using CSS, understand the CSS syntax and apply various CSS techniques to enhance the appearance and functionality of your web applications.

We will also cover advanced CSS techniques and tools to create responsive and visually appealing web pages. By the end of this topic, you will have the skills to design and style web pages effectively using CSS.

In this topic, you will learn to:

- apply CSS styling to a web application
- select and justify a CSS framework for given requirements
- apply advanced CSS techniques.

This topic supports the following learning outcomes:

- L01: Design and create static and dynamic web content using contemporary web technologies and standards.
- L03: Develop a web application demonstrating best practice and using current standards in client-side and server-side scripting and web interface design.
- L04: Select the foremost technologies for application development using current scripting, database and information security standards.
