Nau mai, haere mai ki tēnei wāhanga tuarima. Greetings and a very warm welcome to Topic 5: Client-side web application development – HTML.

In this topic, we will focus on immediate and advanced elements of HTML and its role in client-side web application development. You will learn how to structure web pages using HTML, create various HTML elements, and understand the Document Object Model (DOM). We will also cover advanced HTML techniques and tools to enhance your web applications. By the end of this topic, you will have the skills to design and create well-structured web pages using HTML.

In this topic, you will learn to:

- explain the importance of wireframes for website design
- create the structure of a web page using a model/wireframe
- apply advanced HTML techniques and tools.

This topic supports the following learning outcomes:

- L01: Design and create static and dynamic web content using contemporary web technologies and standards.
- L03: Develop a web application demonstrating best practice and using current standards in client-side and server-side scripting and web interface design.
- L04: Select the foremost technologies for application development using current scripting, database and information security standards.
