Nau mai, haere mai ki tēnei wāhanga tuawhitu. Greetings and a very warm welcome to Topic 7: Client-side web application development and programming – JavaScript.

In this topic, we will focus on various aspects of JavaScript and its role in client-side web application development. You will learn how to use JavaScript to add interactivity and functionality to web pages, understand JavaScript syntax and apply various JavaScript techniques to enhance your web applications. We will also cover advanced JavaScript techniques and tools to create dynamic and responsive web pages. By the end of this topic, you will have the skills to develop client-side web applications using JavaScript effectively.

---

By the end of this topic, you'll be able to:

- apply JavaScript functionality for client-side programming
- apply advanced JavaScript techniques
- select and justify appropriate frameworks for client-side web application development
- develop a client-side web application using a JavaScript framework.

Topic 7 also contributes to the following course learning outcomes:

- L01: Design and create static and dynamic web content using contemporary web technologies and standards.
- L03: Develop a web application demonstrating best practice and using current standards in client-side and server-side scripting and web interface design.
- L04: Select the foremost technologies for application development using current scripting, database, and information security standards.

---
