Nau mai, haere mai ki tēnei wāhanga tuawaru. Greetings and a very warm welcome to Topic 8: Databases for web applications. In this topic, we will focus on databases and their role in web application development.

You will learn about different database technologies, how to create and manage databases and how to connect databases to client-side applications. We will also cover information security technologies and standards to ensure the security of your data. By the end of this topic, you will have the skills to select, implement and manage databases effectively for your web applications.

By the end of this topic, you will be able to:

- understand database and information security technologies and standards
- select the right database for a web application
- create a relational database and prepare SQL queries
- apply database best practices.

Topic 8 also contributes to these course learning outcomes:

- L04: Select the foremost technologies for application development using current scripting, database and information security standards.
