

Tailwind CSS framework 10m

Another well-known CSS framework is Tailwind. Like Bootstrap, it provides many useful features and works well with several JavaScript frameworks, some of which we'll explore in a later topic. However, while Bootstrap is mainly just CSS, Tailwind CSS is built with JavaScript, so the way you use it is different from a standard CSS file.

Like Bootstrap, we can start styling the page content by using one of the many utility classes. For example, the code in the example below will style an `<h1>` tag by making the font three times larger, turning it bold and adding an underline.

LIVE

Hello world!

```
<!doctype html>
<html lang="en">
  <head>
    <meta charset="UTF-8" />
    <meta name="viewport"
content="width=device-width,
initial-scale=1" />
    <script
src="https://cdn.tailwindcss.com">
  </script>
  </head>
  <body>
    <h1 class="text-3xl font-bold
underline"> Hello world!
  </h1>
  </body>
</html>
```
