Nau mai, haere mai ki tēnei wāhanga tuangahuru. Greetings and a very warm welcome to Topic 10: Server-side web application development with procedural and object-oriented database programming.

In this topic, we will focus on the fundamentals of PHP object-oriented programming (OOP) in the context of server-side web application development. You will learn about the principles of OOP, how to implement OOP concepts in PHP and how to perform CRUD (create, read, update and delete) operations using OOP. We will also cover best practices for secure and efficient server-side development. By the end of this topic, you will have the skills to develop robust server-side web applications using OOP principles and PHP.

We will explore:

- PHP web applications using object-oriented programming principles
- CRUD database operations using PHP
- SQL injection protections and data validation measures.

By the end of this topic, you will be able to:

- create a PHP web application using object-oriented programming principles
- perform CRUD database operations using PHP
- apply SQL injection protections and data validation measures.

Topic 10 also contributes to these course learning outcomes:

- L01: Design and create static and dynamic web content using contemporary web technologies and standards.
- L03: Develop a web application demonstrating best practice and using current
