Nau mai, haere mai ki tēnei wāhanga tuangahuru mā tahi. Greetings and a very warm welcome to Topic 11: Server-side web application admin panel development.

In this topic, we will focus on the development of admin panels for server-side web applications. You will learn about the components and best practices for designing admin panels, how to create and manage admin panels using contemporary technologies and how to implement RESTful APIs for web applications. By the end of this topic, you will have the skills to design and develop efficient and secure admin panels for your web applications.

In this topic, we will explore:

- what admin panels are
- how to design an admin panel
- how to use PHP to develop an admin panel
- how APIs work
- how APIs can be used in web application development.

By the end of this topic, you will be able to:

- design a server-side admin panel for a web application
- develop an admin panel for a web application using contemporary technologies
- implement RESTful APIs for a web application.

Topic 11 also contributes to these course learning outcomes:

- L01: Design and create static and dynamic web content using contemporary web technologies and standards.
- L03: Develop a web application demonstrating best practice and using current standards in client-side and server-side scripting and web interface design.

Skip to main content

- L04: Select the foremost technologies for application development using current scripting, database and information security standards.
