Nau mai, haere mai ki tēnei wāhanga tuangahuru mā rua. Greetings and a very warm welcome to Topic 12: Web application performance.

In this topic, we will focus on the performance analysis and quality assurance of web applications. You will learn about different testing techniques, tools and best practices to ensure your web applications are efficient, secure and responsive. We will also cover manual and automated testing methods, performance optimisation strategies and how to create test plans. By the end of this topic, you will have the skills to analyse and improve the performance of your web applications effectively.

In this topic, you will learn about:

- the performance of a web application against select metrics
- web application testing techniques and best practices
- test plans and manual and automated tests.

This will mean that you'll be able to meet the following learning objectives for this topic:

- analyse the performance of a web application against select metrics
- describe web application testing techniques and best practices
- create a test plan
- apply manual and automated tests.

Topic 12 also contributes to these course learning outcomes

- L03: Develop a web application demonstrating best practice and using current standards in client-side and server-side scripting and web interface design.
- L04: Select the foremost technologies for application development using current scripting, database and information security standards.
- L06: Analyse web application performance on a variety of platforms to test behaviour of scripts and resolve any functional issues.
